

BA – iNeuron – SQL- Assignment 8

1. Write an SQL query to fetch intersecting records of two tables.

Ans: `select First_name, count(order_id) as total_orders from customers c inner join order_data o on c.id = o.cust_id group by first_name;`

```
63 • select First_name, count(order_id) as total_orders from customers c inner join order_data o on c.id = o.cust_id group by first_name;
64
```

First_name	total_orders
Boy	1
Blue	1
George	1

2. Write an SQL query to show records from one table that another table does not have.

Ans: `select name from worker2 where not exists (select * from worker1 where worker1.name = worker2.name);`
